brunocanalda@gmail.com

I am a third-year Telecommunications Engineering student at the Universitat Politècnica de Catalunya (UPC - ETSETB) with a high interest in Data Engineering, Applied Maths, Finance & Consulting.

I am now eager to apply an internship, where I can continue growing and collaborating.

Experience

NanoSat Lab UPC, Intern

FEBRUARY 2025 - JUNE 2025, BARCELONA

I collaborated with the nanosatellite laboratory of the Universitat Politècnica de Catalunya (UPC). My work consisted of helping to develop software for a temperature sensor that would later be integrated into the ³Cat-8 nanosatellite.

Education

UPC, Bachelor's Degree in Telecommunications Engineering

SEPTEMBER 2024 - JUNE 2028 (EXPECTED), BARCELONA

Currently in 3rd year of my studies. Studies carried out at the Escola Tècnica Superior d'Enginyeria de Telecomunicació de Barcelona (ETSETB) of the Universitat Politècnica de Catalunya. The first three semesters were completed with total success, passing all subjects on the first attempt.

The studies are done within the PARS program (bachelor's + master's degree), which has an expected duration of six years.

Languages & Skills

I speak **Catalan** and **Spanish** natively and have full professional competence in **English** (B2+ level).

I have knowledge of the programming languages **C**, **Python** and **Java** and tools such as **Excel**, **MATLAB** or **PiSpice**.

Courses

In my free time, I have completed several online courses from prestigious universities or companies, all leaders in their respective sectors. Most of the courses are focused on engineering, data science, data analytics, finance or consulting.

- **Deloitte** - [Data Analytics](#)
Completed a Deloitte job simulation involving data analysis and forensic technology
Created a data dashboard using Tableau
Used Excel to classify data and draw business conclusions
- **Goldman Sachs** - [Risk](#)
- **IE University** - [Introduction to Data Science](#)
- **ISAE SUPAERO** - [Flight Mechanics - The basis](#)
- **ISAE SUPAERO** - [New Space: Acces to space - Basics](#)

Projects

During my academic stage, I have carried out some projects. Some examples:

- **Cinquillo**: Together with two classmates, we developed a program that simulated the popular Spanish card game "cinquillo". It was programmed entirely in C and had two game modes: manual or automatic.
- **ROUV**: Together with three classmates, we developed a "Remotely Operated Underwater Vehicle" (ROUV) following the MIT specifications. I was responsible for programming the MATLAB code that allowed the vehicle to orient itself in the water with the help of ultrasonic sensors.
